

Pyrite

HEALING PROPERTIES

Pyrite, also known as Fool's Gold, is an iron sulfide with the chemical formula FeS_2 (iron (II) disulfide). Pyrite is all about protection and encouraging abundance. It's a stone that tries its best to shield and protect the one who wears it in every way possible! It can protect you from energy draining people, protect you from psychic attacks, cut through negative vibrations, clear EMF smog or simply stop those toxic thought patterns from running through your head; Pyrite wants to keep you pure and draw in prosperity to you!

HOW TO USE PYRITE

If you want help to protect your home from negativity, place a piece of Pyrite by entryways to soak up any bad energy before it gets the chance to step in. It's also a wonderful stone for attracting wealth, prosperity, abundance, and a dash of good luck. To promote this, place pieces of Pyrite in workspaces, studios, and any spot where creative thinking takes place. Another way to bring out the energy of the Pyrite crystal is to wear it as an amulet or talisman. By picking a jewelry style that places Pyrite close to the skin, you aren't blocking this amazing crystal from doing its essential work. This also give it the best chance to nourish the body with its healing energy. This stone is at the very top of its power game.

HOW TO CLEANSE & CHARGE PYRITE

All crystals (especially protection crystals and those that absorb negativity) can get full and tired at times. You can rejuvenate them with easy cleansing methods. While some crystals and stones react well to being rinsed with soap and warm water, Pyrite isn't such a stone to enjoy this kind of treatment. Iron Pyrite, if it gets it can discolor or even rust. You want to keep your Pyrite sparkling. Instead of washing with water, you can smudge it with sage or other herbal smoke. To recharge Pyrite you can place it in the earth to let it grow richer in its natural element. You can also bury it in sea salt for a few hours to let it go through a truly deep cleanse and recharge. If burying your crystal in salt seems too much, you can always just place it next to a bowl of salt and even though the two don't touch, the salt will still be able to absorb that negative energy.
