	DRAGONITE
	SAME HEIGHT
	SAME WEIGHT
<p>You'll often hear tales of this kindhearted Pokémon rescuing people or Pokémon that are drowning. What is less spoken about is that Dragonite will commonly hold captives within their belly to keep them safe, although some can forget that they've kept these trainers inside, making their escape something many an embarrassed trainer would rather not talk about...</p>	

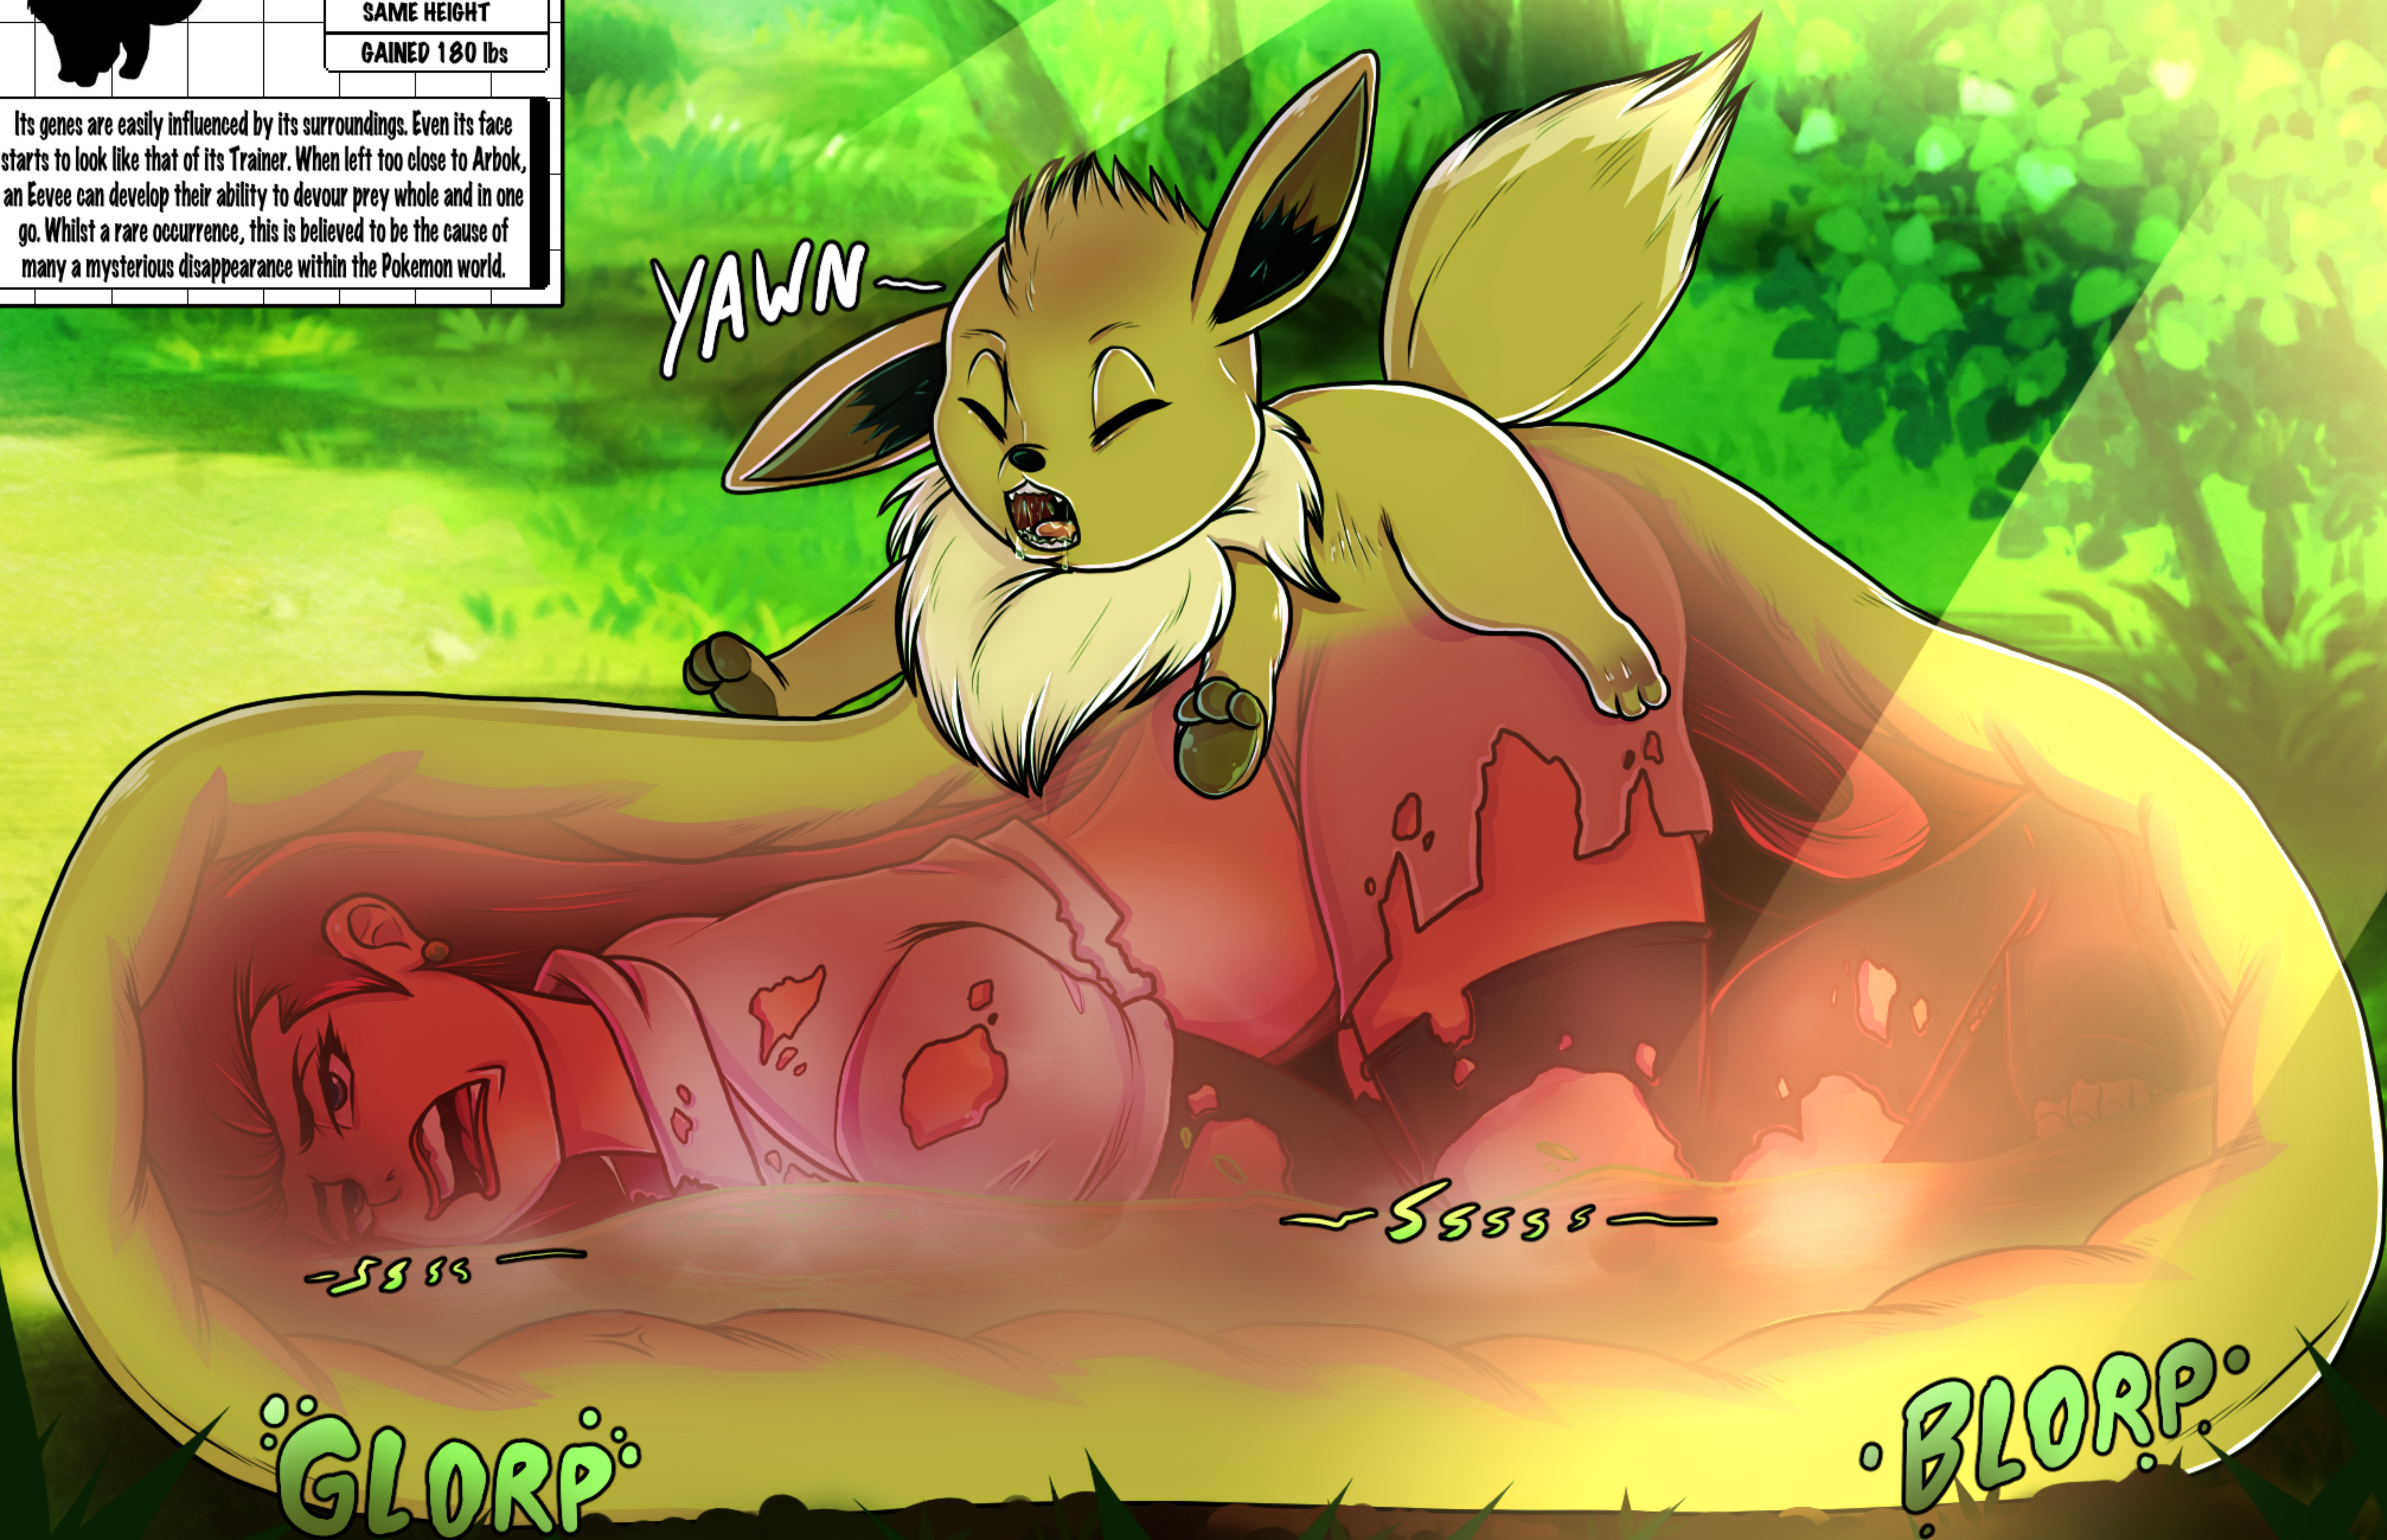

EEVEE

SAME HEIGHT

GAINED 180 lbs

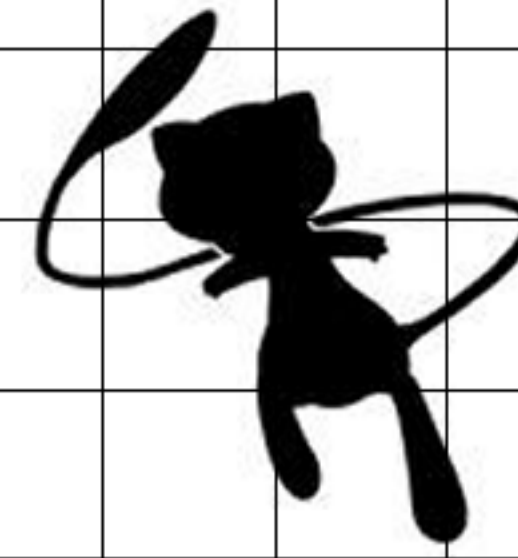

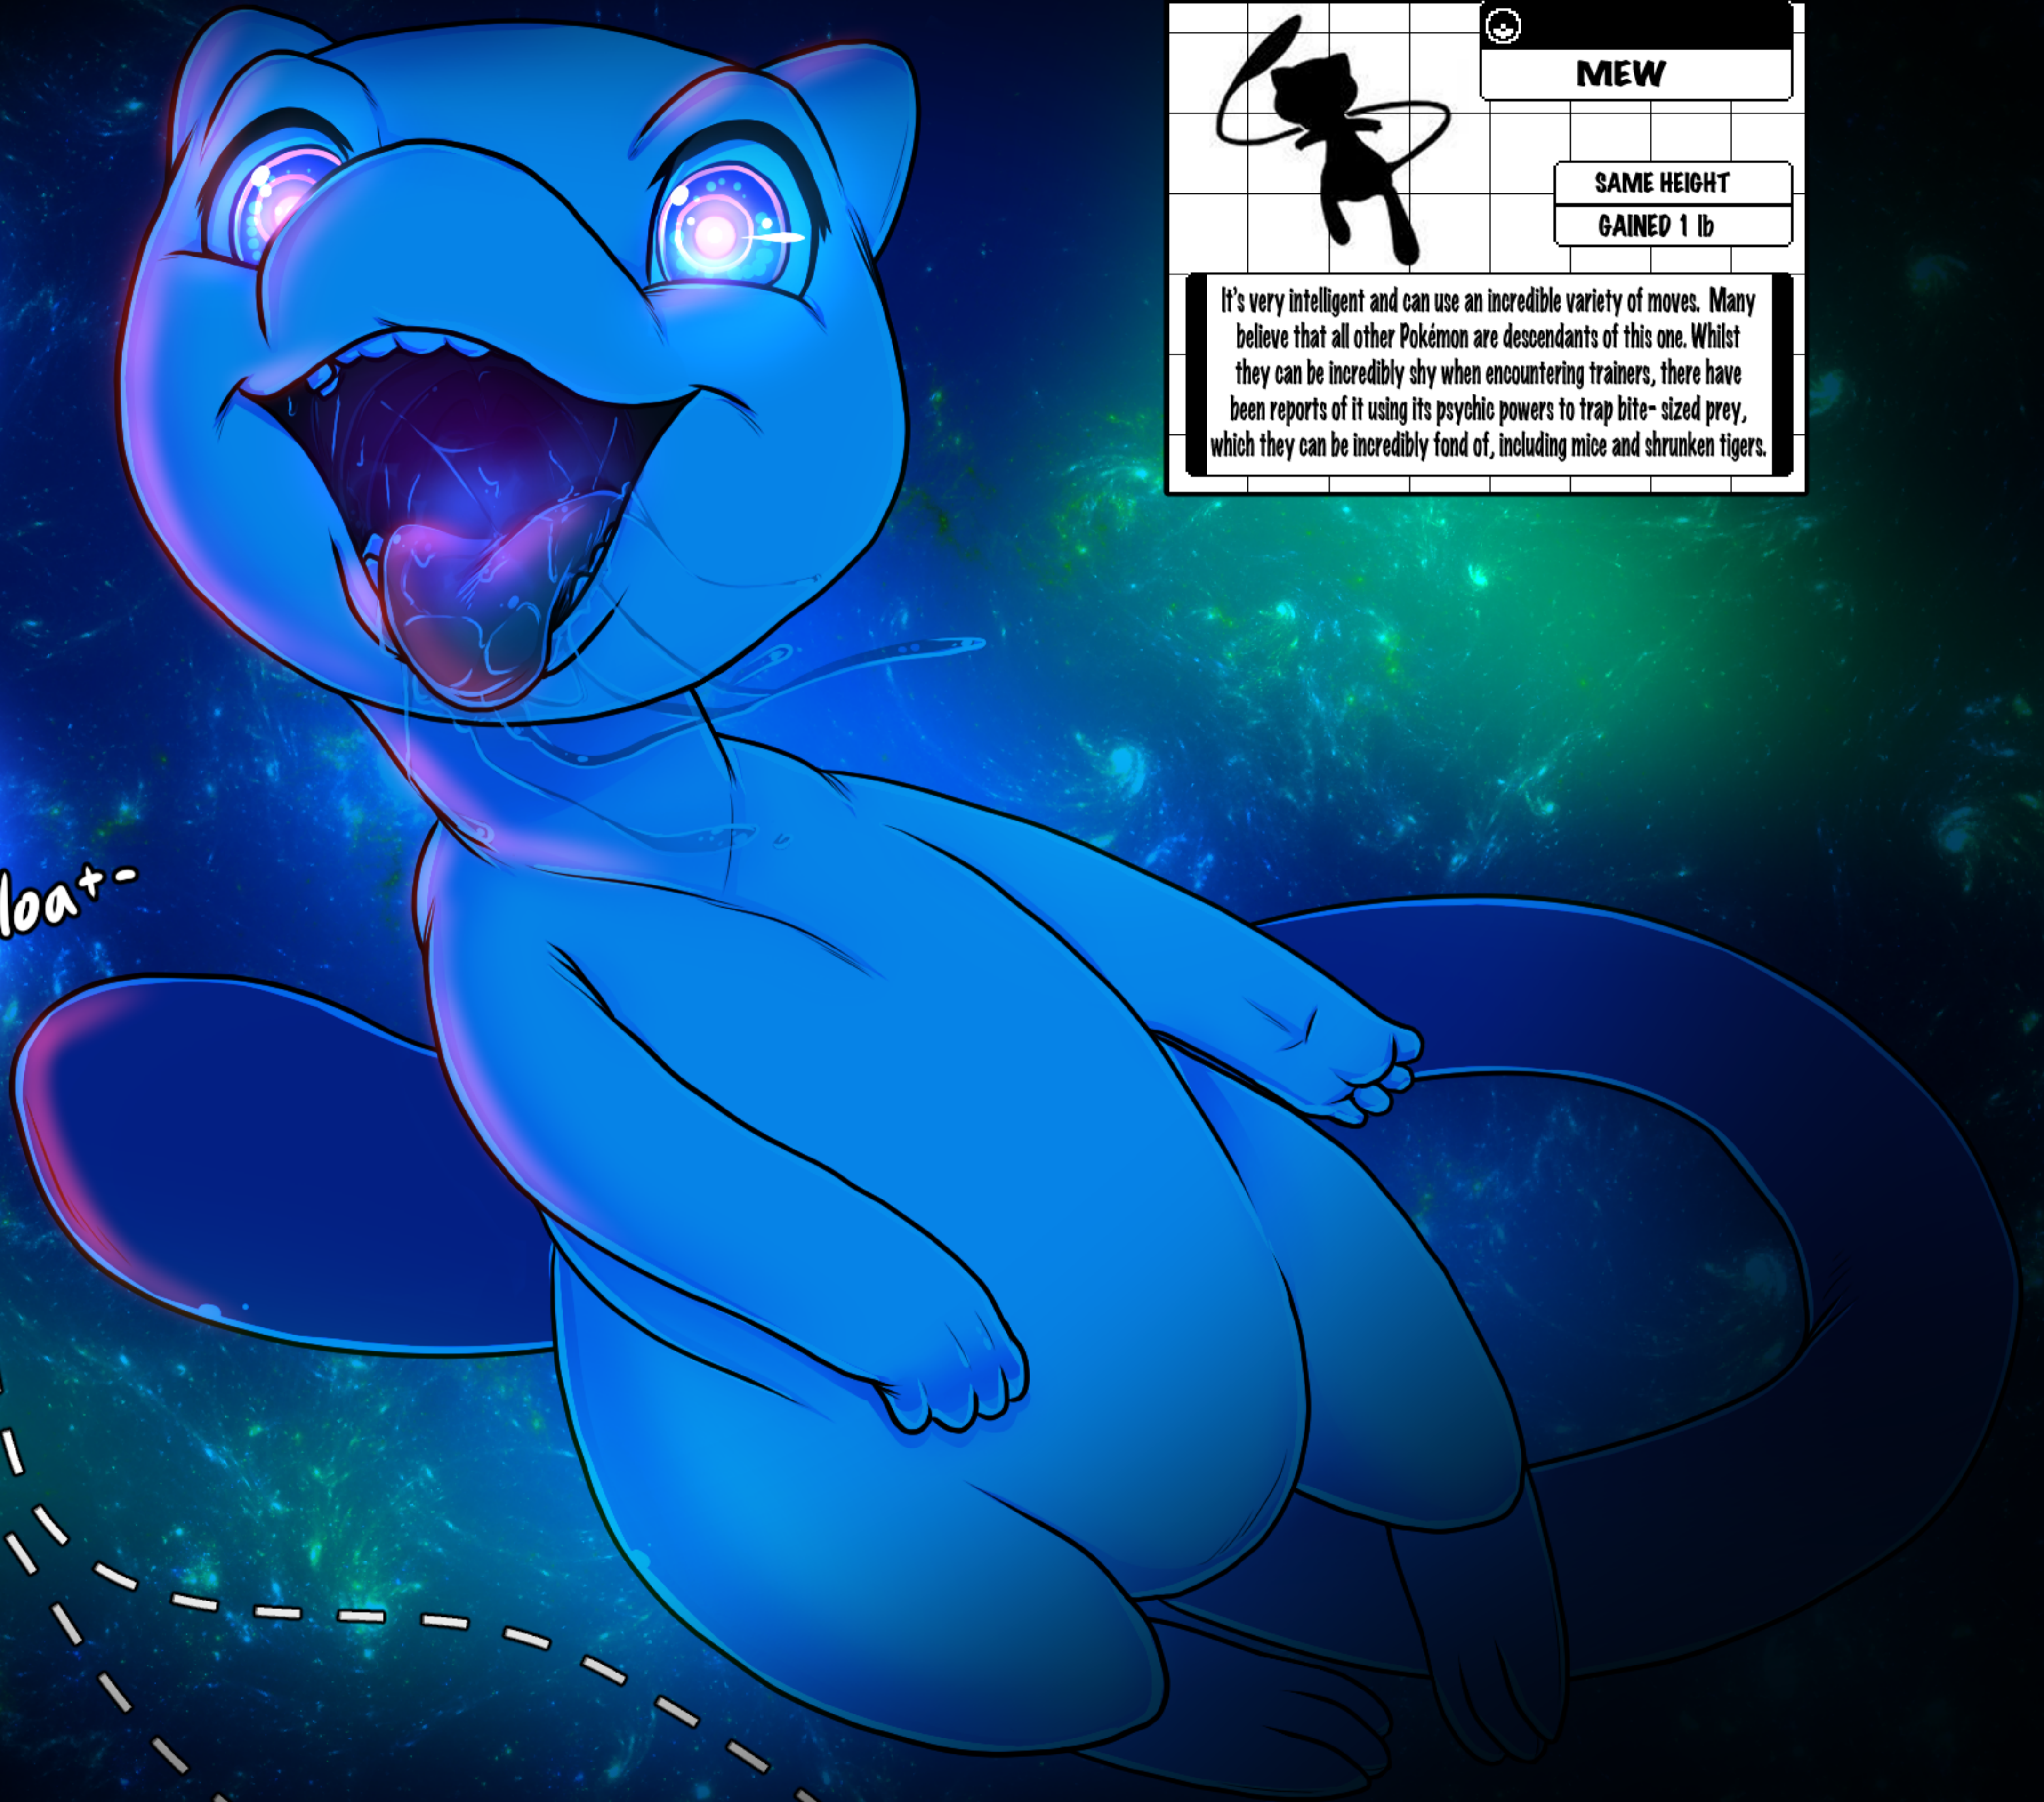

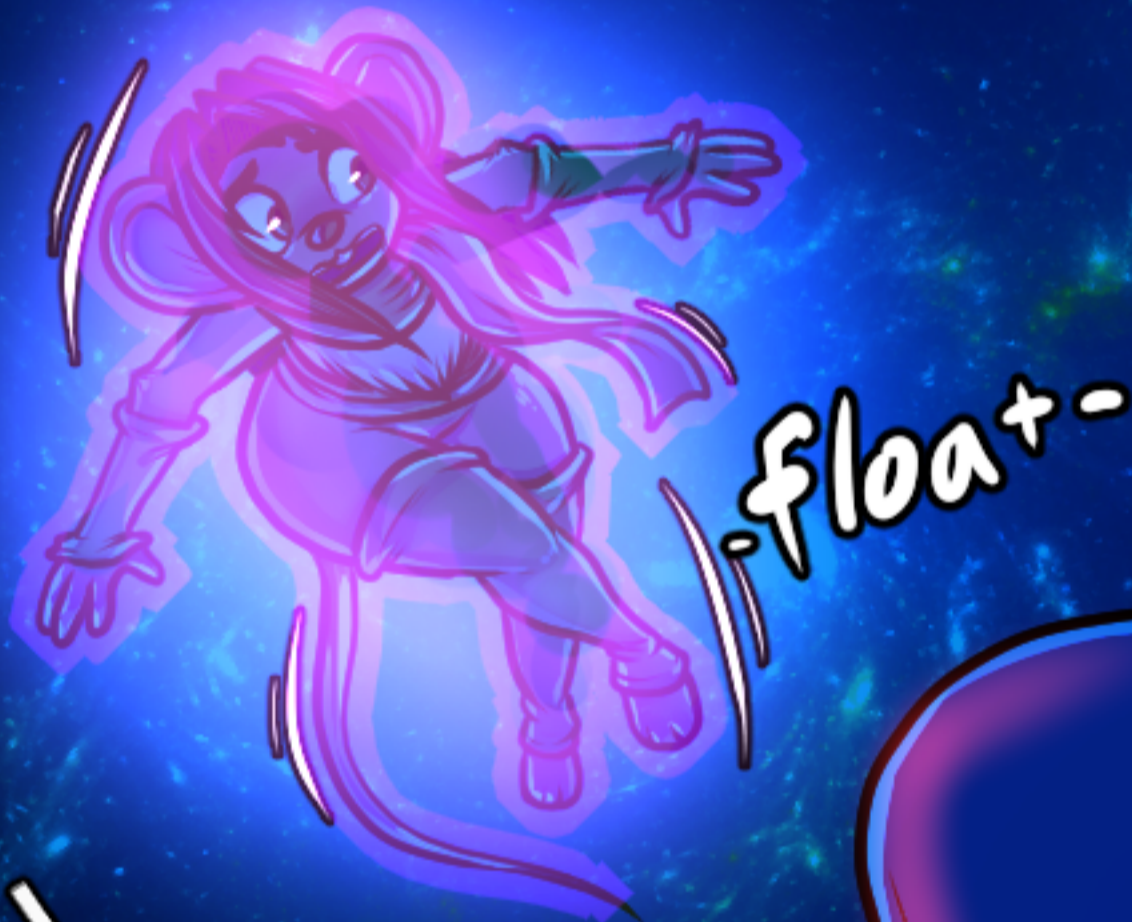

Its genes are easily influenced by its surroundings. Even its face starts to look like that of its Trainer. When left too close to Arbok, an Eevee can develop their ability to devour prey whole and in one go. Whilst a rare occurrence, this is believed to be the cause of many a mysterious disappearance within the Pokemon world.

<p>It's very intelligent and can use an incredible variety of moves. Many believe that all other Pokémon are descendants of this one. PIKACHU

BOTH SAME HEIGHT

BOTH GAINED 3 lbs

Whenever Pikachu comes across something new, it blasts it with a jolt of electricity. If you come across a blackened berry, it's evidence that this Pokémon mistook the intensity of its charge. Shrunk trainers are warned not to wear any clothing that might be bright coloured or have them easily mistaken for berries as they too may share a fate similar to the berries that this mouse Pokemon has so commonly been found to swallow whole without a second thought.

	 MEWTWO
	SAME HEIGHT
	GAINED 173 lbs

They did however give it many ways to renew expended energy, including a variety of deceptive manners in which it can devour its prey. Unexpected meals are caught by its powerful tail, which will never let go once it has caught something, slowly swallowing them alive as they're funnelled through the snake-like passage.</p>
