Hero Me Gen7 Master Suite

Hero Me Gen7 Release 3 is now available. The STLs can be found in the latest post at: https://patreon.com/MediaMan3D

Welcome and thank you for selecting the Hero Me Gen7 cooling system for your 3D printer. The original design concepts behind the Hero Me was to provide superior part cooling performance and to make a system that was modular, to support different brands and models of printers, hotends, fans, and other addons. The Hero Me has now been downloaded over a half million times! The core modularity of the Hero Me has enabled the creation of over 650 different addons and remixes across the maker community.

Now seven generations later, the Hero Me Gen7 continues with these key design guidelines. The Hero Me Gen7 has maintained broad backward compatible to previous generations. The flexibility of the Hero Me Gen7 also makes it future proof, as it also supports new tool changing systems, including the Wham Bam MUTANT, PrinterMods Xchange, and the BigTreeTech HermitCrab. The Hero Me Gen7 is the top aftermarket part cooling system available on the Internet.

This Hero Me Gen7 release supports over 90 3D Printer models (plus clones), 31 Hotends, 32 Extruders (40 mount options), 14 ABL Sensors, 35 Part Cooling Duct options, 12 Cable Management options, 9 ADXL345 mounts, and 4 LED bar mounts.

Gen7 now supports **OVER 19 BILLION** possible 3D printer setups! Never fear, the Gen7 is a breeze for part selection. Hero Me Patrons have exclusive access to this release for 30 days before posting to Printables.com and other STL libraries.

Hot News! I will be attending and exhibiting in the creators area the **Rocky Mountain RepRap Festival on April 22nd and 23rd**. https://rockymountainreprapfestival.com If you live in the Denver-Loveland area, come to the Festival!

Thank you!
Andrew
